

CLAIMS

1. A printer for servicing one or more print requests comprising:
a print queue for storing data associated with one or more print requests;
a display screen for displaying the content of said one or more print requests; and
5 control interface for controlling the processing of the print requests.
2. The printer of claim 1, further comprising executable code stored in a
memory, wherein execution of the code by a processor causes the processor to:
in response to user interaction with the control interface, display on the display
screen the print requests stored in a first order.
- 10 3. The printer of claim 2, wherein execution of the code by a processor
causes the processor to:
in response to user interaction with the control interface, rearrange the order of
requests stored in the queue.
4. The printer of claim 3, wherein execution of the code by a processor
15 causes the processor to:
in response to user interaction with the control interface, select a print request
stored in the queue.
5. The printer of claim 4, wherein execution of the code by a processor
causes the processor to:
20 in response to user interaction with the control interface, print the selected print
request.
6. The printer of claim 4, wherein execution of the code by a processor
causes the processor to:
in response to user interaction with the control interface, delete the selected print
25 request.
7. The printer of claim 4, wherein execution of the code by a processor
causes the processor to:
in response to user interaction with the control interface, display the content of the
file associated with the selected print request on the display screen.

8. The printer of claim 4, wherein execution of the code by a processor causes the processor to:

in response to user interaction with the control interface, scroll through the content of the file associated with the selected print request.

5 9. The printer of claim 4, wherein execution of the code by a processor causes the processor to:

in response to user interaction with the control interface, select the next print request stored in the queue.

10 10. The printer of claim 4, wherein execution of the code by a processor causes the processor to:

in response to user interaction with the control interface, select the prior print request stored in the queue.

11. A method for processing one or more print requests submitted to a printer, said printer having a queue, a display, and user interface, said method comprising:

15 storing the print requests in the queue;

displaying the print requests stored in the queue;

reconfiguring the order of the print requests stored in the queue, in response to user interaction with the user interface;

20 selecting a print request stored in the queue, in response to user interaction with the user interface; and

printing the selected print request, in response to user interaction with the user interface.

12. The method of claim 11, further comprising:

25 deleting the selected print request, in response to user interaction with the user interface.

13. The method of claim 12, further comprising:

displaying the content of the file associated with the selected print request on the display; in response to user interaction with the user interface.

14. The method of claim 13, further comprising:

scrolling through the content of the file associated with the selected print request;
5 in response to user interaction with the user interface.

15. The method of claim 14, further comprising:

selecting a print request stored in the queue next in order in relation to the selected request; in response to user interaction with the user interface.

16. The method of claim 14, further comprising:

10 selecting a print request stored in the queue subsequent in order in relation to the selected request, in response to user interaction with the user interface.

17. A printer for processing one or more printing requests, comprising:

means for storing data associated with said one or more print requests in a first order;

15 means for rearranging said one or more print requests in a second order;

means for displaying the content of the storing means; and

means for displaying the content of said one or more print requests.

18. The printer of claim 17 further comprising:

means for selecting one or more of said print requests for printing.

20 19. The printer of claim 18 further comprising:

means for deleting a selected print request from the queue.

20. The printer of claim 18 further comprising:

means for printing a selected request.
